

ABSTRACT OF THE DISCLOSURE

Methods for treating a patient having neurological, psychotic, and psychiatric disorders are described comprising the steps of administering to the patient an effective amount of a partial and/or full dopamine D₁ receptor agonist, and administering to the patient an effective amount of a dopamine D₂ receptor antagonist. Pharmaceutical compositions comprising a dopamine D₁ receptor agonist and a dopamine D₂ receptor antagonist are also described. The D₁ dopamine receptor agonist and the D₂ dopamine receptor antagonist can be administered to the patient in the same or in a different composition or compositions.
